

Frogs Have Special Skin

By ReadWorks

Leon Brooks

Have you ever seen a frog in a pond? You can often spot one there. Most frogs live near water. They need to keep their skin wet.

A frog's skin is special. It makes a slimy coating that helps the frog stay wet. A frog drinks through its skin. It also breathes through its skin. A frog can do that only when its skin is wet.

Frogs also breathe using lungs. What else do frogs use lungs for? Frogs make noise. Ribbit!

Write two facts that you learned about frogs.

A Shell is Great for Protection

By ReadWorks

All turtles have shells. Most turtles have hard shells.

Hard shells protect turtles. A predator cannot bite the hard shell. Some turtles can pull their legs inside their shells. They can pull in their heads and tails too.

Shells come in many different shapes. Some shells are tall and round. Other shells are flat.

Sometimes cartoons show turtles leaving their shells. But... that cannot really happen! A turtle cannot leave its shell. The shell is attached to the turtle. It is a permanent part of its body.

Write two facts that you learned about turtles.

What Lives in the Desert?

By Rachelle Kreisman

A desert is a dry place with little rain. How little? A desert gets less than ten inches of rain each year. Some deserts are hot. A few can be cold. A desert is a habitat. A habitat is a place where animals and plants live.

Hot deserts are home to many kinds of living things. Animals living there include owls, snakes, lizards, and coyotes. Another hot desert animal is the kangaroo rat. It sleeps underground during the day, when the weather is hot. The kangaroo rat comes out at night, when it is cooler. Kangaroo rats get the water they need from food. They eat mostly seeds.

Write two facts that you learned about desert animals.
